LABORLINK

Community Employment Service System Design

#UI DESIGN #UX DESIGN #SERVICE DESIGN

Many immigrants face challenges when looking for work due to language barriers, unfamiliar hiring processes, and a lack of reliable information. At the same time, employers often struggle to find trustworthy workers and maintain effective communication.
Therefore, I designed LaborLink, a community-based employment platform that connects immigrant workers with local job opportunities. Through job matching, language assistance, community support, and employer verification, LaborLink helps reduce barriers in the job search process and builds more reliable working relationships.
This project goes beyond simply helping users find jobs. It aims to create a supportive community network and service system that helps new immigrants better integrate into local society and gain more stable opportunities for growth.
