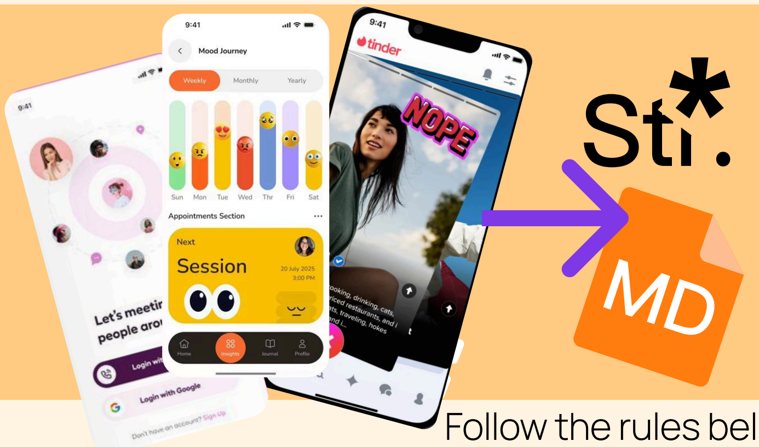
# INFORMATION

## Workflows With Agents

This Product is for...



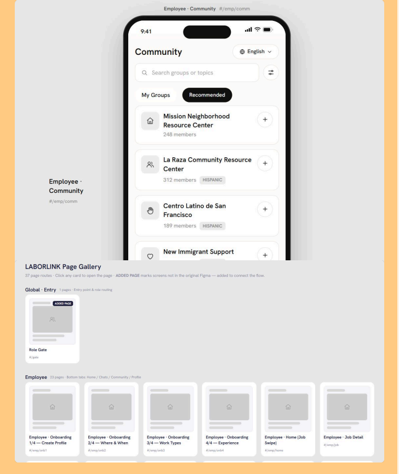
Follow the rules below...

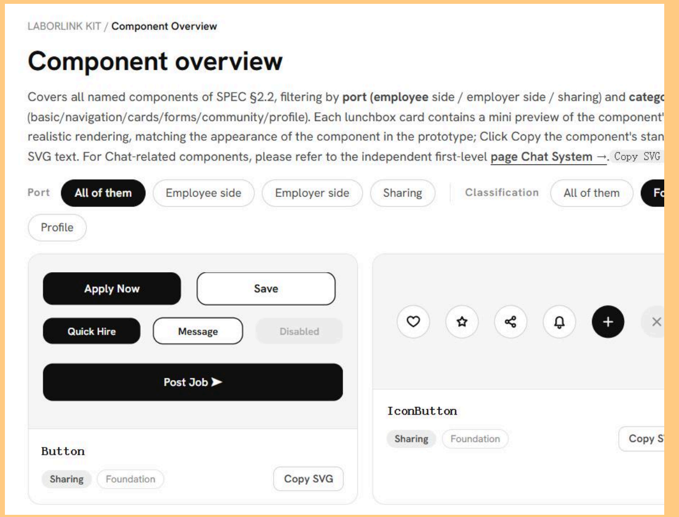
Input project background, app structure, and UI cases into GPT.
Help AI understand the project.

### 1 Context Input

### 2 Lofi Create

Provide context and references to Stitch for low-fi generation.
Refine pages in Figma and build prototypes with Cursor.
Use VibeCoding to create HTML prototypes and complete layouts.





LABORLINK KIT / Component Overview

**Component overview**

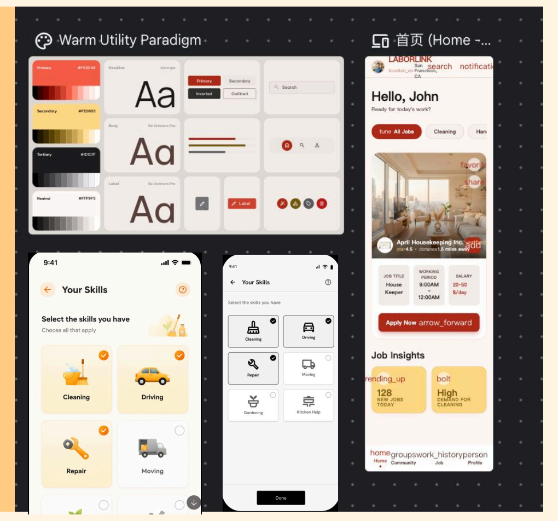
Covers all named components of SPEC §2.2, filtering by port (employee side / employer side / sharing) and catego (basic/navigation/cards/forms/community/profile). Each lunchbox card contains a mini preview of the component realistic rendering, matching the appearance of the component in the prototype; Click Copy the component's stan SVG text. For Chat-related components, please refer to the independent first-level page Chat System →. Copy SVG

Extract reusable components during refinement.
Use the Moodboard, design guidelines, and component library to create a constrained Design.md with ChatGPT.

### 3 Design System

### 4 Hi-Fi Create

Combine the low-fi prototype with Design.md for high-fidelity refinement.
Use AI iteration to improve consistency and finalize the design.



## Moodboard

community

multiculturalism

human centered design

neighborhood

warm color

inclusivity

blue-collar worker

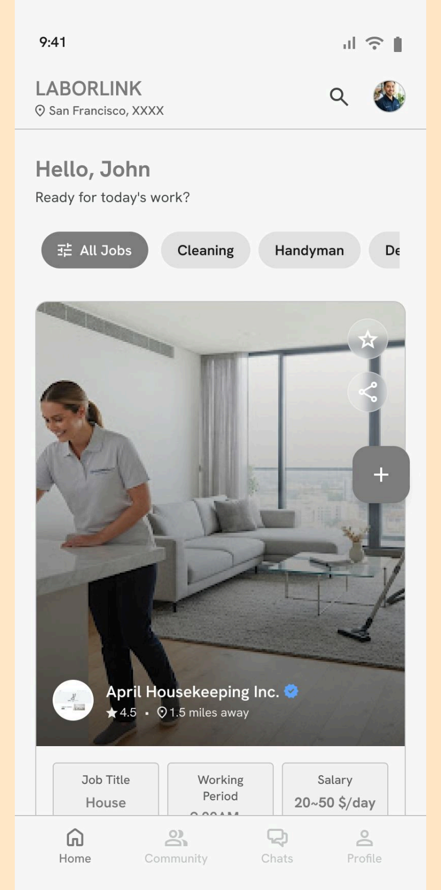
## How To Select Useful Interfaces?

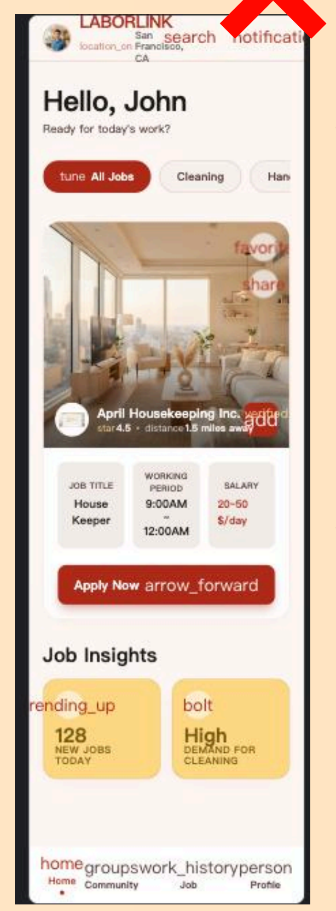
Usability
Credibility
Visual Alignment
Affective Comfort

**Not all AI-generated interfaces were usable or followed the design guidelines.**
**We selected and refined them using the four design principles to create the final high-fidelity interface.**

### Lofi

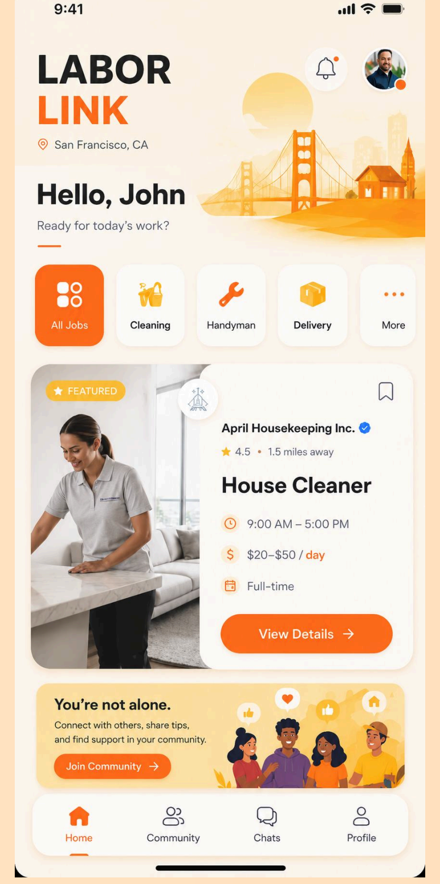


### Stitch ✗

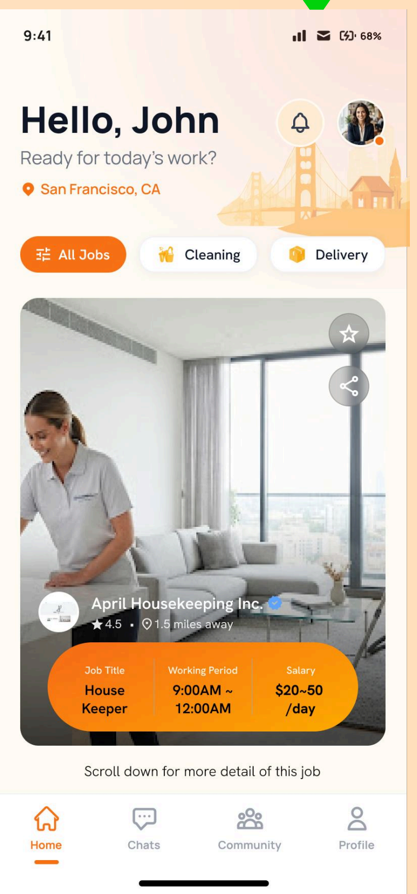


- Stitch added visuals but felt generic.
- Image 2.0 introduced warm colors and community elements.

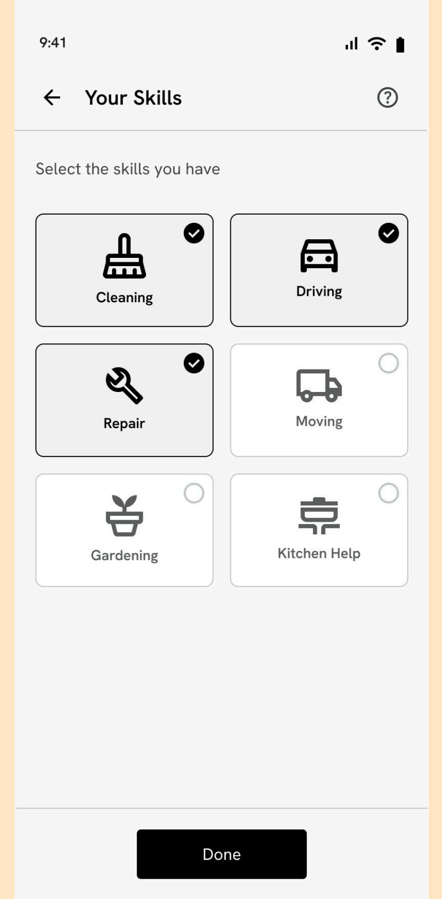
### Image2.0 ✓✗



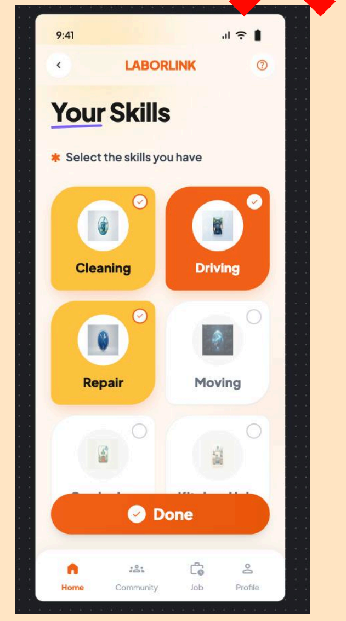
### Hi-Fi ✓



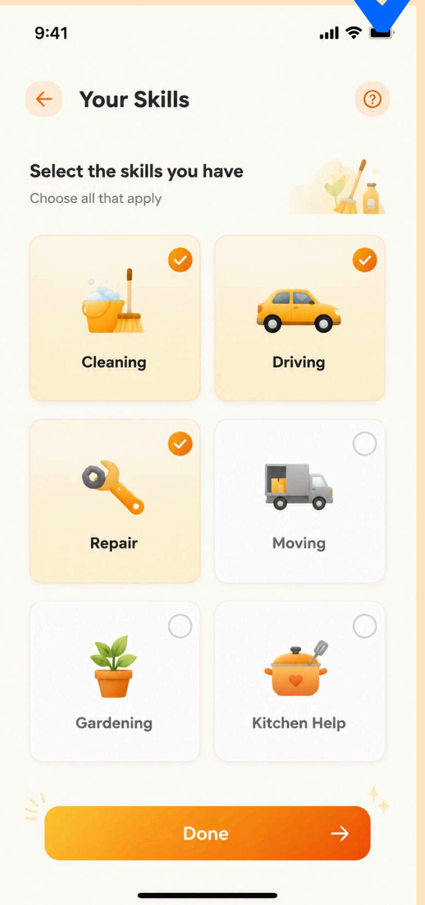
### Lofi



### Stitch ✗



### Image2.0 ✓✗



- Image 2.0 improved icons and visuals.
- Hi-fi created a clearer and more engaging skill selection page.

### Hi-Fi ✓
